

Enable Solutions

Data Strategy

Develop a data strategy to transform your organisation. We will identify how data-centricity can achieve your business goals, considering trends and business models for your industry. After carrying out a maturity assessment, we will deliver a prioritised roadmap to enable you to become a data-driven organisation.

Data Optimisation

High quality data is essential to achieving business intelligence. We will assess the value of your existing data and define metrics and recommendations for ongoing data quality improvements in line with your business objectives. This will ensure a strong return on investment for all data infrastructure and analysis.

Data Platform Solutions

Centralise data from all parts of your organisation into one platform. Whether on-site or in the cloud, we can design and build a data platform to enable the discovery of actionable insights via analytics and visualisation. Add on managed services and we'll keep the lights on while you focus on strategy and value-add projects.

Solutions designed for you, at any stage of your data-driven journey.

Enable

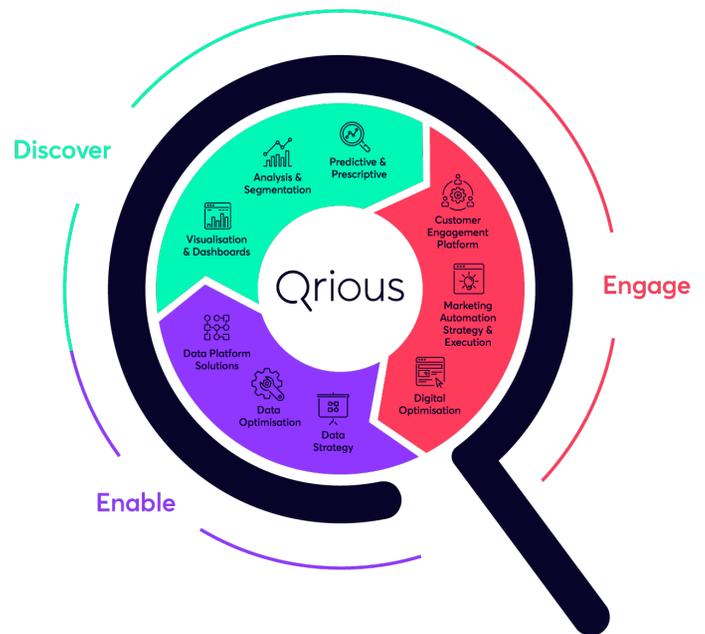

Unleashing intelligent solutions to manage and optimise your data.

Discover

Intelligent analytics to unleash actionable insight.

Engage

Intelligent data and marketing to unleash engagement.

Why Qrious?

Qrious is trusted to design, build and manage data platform solutions. This includes managing leading applications of data and analytics in government and designing advanced data warehousing solutions for New Zealand enterprises. We know how to create high performing environments that have data elasticity, scalability, accessibility and security front and centre.

Start your journey to becoming data-driven. Contact Qrious today at info@qrious.co.nz
