

Why Project Risk Predictor?

Automatic risk prediction

Receive estimated revenue gain or loss for each of your projects. This automatically updates as new project data is fed through our proven model and uses historic data as a benchmark.

Facilitate swift intervention

Use our UbiQuity automated communication system to trigger risk alerts to all key stakeholders, allowing for immediate mitigation, intervention and risk management as required.

Project delivery success

Use the insights uncovered by the project risk predictions to deliver future projects to budget. The result? Happy clients and a strong reputation in the market.

How does it work?

Our risk model uses your historic and current project data to create a predictive model that automatically identifies at-risk projects and triggers alerts to your team.

Why Qrious?

Qrious has specialist experience implementing and optimising Project Risk Predictors. Our team of data and analytics professionals can manage the solution for you, so you can focus on project strategy and mitigation. Need to monitor more than budget? We can tailor a solution to suit your needs.
